

## M E M O

TO: District Manager

FROM: Director of Operations

SUBJECT: Operations Department Project Status Report  
Week Ending February 01, 2008

DATE: February 01, 2008

### **RECOMMENDATION:**

It is recommended that the District Manager review and file the Operations Department Project Status Report for the week ending February 01, 2008.

### **BACKGROUND:**

#### **Water Audit**

During the reporting period staff worked on the preparation of a system wide water audit. The water audit is in draft presentation and will be finalized for Board of Directors review at the February 21, 2008 Board meeting. The water audit is a breakdown of all uses of water production.

#### **Winter Storms**

Winter storms have provided plentiful rainfall for the month of January. Total rainfall to date February 01, 2008 collected at the Operations Building is 30.75 inches. Currently rainfall is at 113% of average normal to date, which is 27.00 inches. District staff is monitoring drought conditions as it is too early to tell if water restrictions will be needed this summer. During the reporting period staff spent the majority of time changing operations from summer to winter operations, shutting down the North System Well Field. Currently surface water is being supplied to all customers in the North System with Foreman Creek supplying all production.
