DATE: October 18, 2007

SUBJECT: Water Conservation Credit Programs Status Report

### **RECOMMENDATION:**

It is recommended that the Board of Directors review and file this memo regarding the Water Conservation Credit Programs for the period July 1, 2007 through September 30, 2007.

### **BACKGROUND:**

At the March 6, 2003 Board of Director's meeting, your Board approved Resolution No. 27 (02-03) which implemented Water Conservation Credit Programs for the following:

- 1) A rebate credit, applied to the customer's water bill, of actual purchase not to exceed a maximum of \$100.00 per fixture, for the replacement of an existing conventional high-volume toilet (3.5+ gpf) with an ultra-low flow toilet (ULFT) (1.6 gpf); and
- 2) A rebate credit, applied to the customer's water bill, of actual purchase not to exceed a maximum of \$100.00 per appliance, for the purchase and installation of a high-efficiency clothes washer (HECW).

During the period July 1, 2007- September 30, 2007, District staff has processed 73 rebate credits for the purchase and installation of ultra-low flow toilets in the amount of \$7,108.40 and 19 rebate credits for the purchase and installation of high efficiency clothes washers in the amount of \$1,900.00. A total of 92 rebate credits (73 ULFT in the amount of \$7,108.40 and 19 HECW in the amount of \$1,900.00) in the amount of \$9,008.40 have been processed to date for Fiscal Year 2007/2008. The total available budget for Fiscal Year 2007/2008 is \$20,000.00.

Estimated water savings associated with the Water Conservation Credit Program are based upon the following:

High Efficiency Washing Machines assume average estimated annual savings of 5,100 gallons/year per replacement of a low-efficiency clothes washer with a high-efficiency washer.

Low-flush toilet estimated water use savings for the installation of a low-flush toilet is dependant on specific household demographics. Assumptions utilized for estimated savings are as follows:

- 2.64 average persons per household
- Manufacture date of toilet being replaced; 1980-1994
- 4.0 gallons per flush (gpf)

Utilizing these assumptions, the annual savings for the installation of a residential low-flush toilet range between 4,468-11,794 gallons/year per toilet. Average estimated annual savings of 8,130/year per toilet.

It is recommended that the Board of Directors review and file this memo regarding the Water Conservation Credit Programs for the period July 1, 2007-September 30, 2007.
