

The following questions from bidders were received prior to the 3/24/2021 deadline published in the RFP for bidder questions regarding the 2021 Lyon Complex Access Road project RFP. Questions are in black, answers are in purple for clarity:

- 1) We have reviewed the geotechnical reports from the 2020 and 2021 RFP documents. Are there additional geotechnical reports available to review? *Those are the only geotech reports we have. Please include any further geotech investigation that may be required in your bid.*
- 2) The Cover Page for Attachment A of the RFP lists August 2018 & 2019 Boring Locations. We have reviewed the two Boring Site Plans by Paul Jensen, however both are dated 2018, and appear to show the southern section of the project site. Are there survey maps of the northern section of the project site, near Big Steel Tank and Little Lyon Storage Tank? *The two site plans, while both dated 2018, are not the same. Note that the boring locations and numbers are not identical. The site plan identified as 2018 is from the HKA geotech report in 2018, the second (identified as 2019) is from the HKA 2019 report. I believe that they used the same base site plan for both reports, simply updating their work on the plan.*
