FINAL

SAN LORENZO VALLEY WATER DISTRICT

WATER AND SEWER LONG TERM FINANCIAL PLAN

January 2007

Prepared by:

Municipal Financial Services 311 Bryant Avenue Alameda, California 94501-3531 Tel: (510) 522-5251 Fax: (510) 522-5251

January 22, 2007

Mr. James Mueller General Manager San Lorenzo Valley Water District 13060 Highway 9 Boulder Creek, CA 95006-9119

Subject: Water and Sewer Long Term Financial Evaluation Draft Report

Dear Mr. Mueller:

In accordance with our June 2006 proposal, we have prepared a Water and Sewer Long Term Financial Evaluation report.

In the report we have developed recommendations for water and sewer rate increases that will enable the District to pay operations expenditures and capital replacement expenditures while maintaining a prudent level of reserves.

If you have any questions, please call Tom Pavletic at (925) 210–2385 (Brown and Caldwell office) or (510) 522-5251 (Alameda office).

Very truly yours,

MUNICIPAL FINANCIAL SERVICES

Tom Payletic

EXECUTIVE SUMMARY

This report documents the development of a long term financial plan for the San Lorenzo Valley Water District (District). The purpose of the plan is to help ensure the fiscal vitality of the District's Water Fund and Sewer Fund. A separate financial plan is developed for each fund. This chapter describes the District's organization and operations, the objectives of the long term financial planning effort, the methodology used to develop the financial plans, and the spreadsheet created for financial calculations.

Organization and Operations

The District was established in 1941 pursuant to provisions in the California Water Code. It was created to develop a water supply for domestic requirements as well as for fire protection and recreational facilities in the San Lorenzo Valley (except the Felton area). The District contains approximately 58 square miles and serves approximately 5,750 water customers and 55 sewer customers. The District is governed by a five person Board of Directors elected to four year terms by registered voters throughout the District's boundaries.

The District has two proprietary funds – the Water Enterprise Fund and the Sewer Enterprise Fund. In this study, the development of a long-term financial plan for the District provides separate calculations and findings for each enterprise.

Long Term Financial Plan Objectives

The primary objective of long term financial planning is to project annual water and sewer rates that will allow the District to pay operations expenditures and capital replacement expenditures while maintaining a prudent level of reserves.

The long term financial plan unifies the many separate planning efforts typically conducted by a water enterprise or sewer enterprise. Other types of planning or study efforts typically conducted include the following:

- Periodic master planning for replacement of assets (capital spending)
- Water resource planning (water supply and water use)
- Annual budgeting of expenditures and revenues (operational and other non-capital costs)
- Cost allocation studies (rate equity and rate structure)

The long term financial plan is not intended to supplant these other planning efforts. The long term financial plan is intended to be a rough approximation of the projected, cumulative impact of the other plans.

The study period for these financial plans is from Fiscal Years (FY) 2006 through 2055 (50 years). The length of the study period is appropriate given the nature of the water enterprise and sewer enterprise. The nature of these enterprises requires replacement of assets with useful lives that range from 10-70 years. Many of the assets must be replaced in their entirety and cannot be

¹ Ensuring fiscal vitality is part of the District's Mission which states, "Our mission is to provide our customers and all future generations with safe, reliable and high quality drinking water at an equitable price; to create and maintain outstanding customer service; to manage and protect the environmental health of the aquifers and watersheds; and, to ensure the fiscal vitality of the San Lorenzo Valley Water District."

replaced piece by piece over time. The construction costs for replacement of assets are very high (for example, a 500,000 gallon water storage tank might cost \$1,000,000).

The key parameters in a long term financial plan for water and sewer enterprises are listed below:

- Projected revenues from rates
- Projected operating expenditures
- Projected capital expenditures
- Projected reserves

The role of revenue from rates in the development of the long term financial plan is shown in Figure ES.1.

Operations Expenditures

+
Capital Expenditures

Maintain Fund Balance

Figure ES.1 Financial Planning Methodology

Water Fund Summary

Revenue from water rates is projected to account for over 90 percent of revenue for the water system through FY 2055. The projected water rate increases recommended as part of this financial evaluation are shown in Table ES.1.

Rate Increase Recommendations	Increase	Year Start		Year End	Years
Increase 1	3.5%	2007	-	2034	28
Increase 2	3.0%	2035	-	2055	21

Table ES.1 Recommended Water Rate Increases

Revenues from water rates and capital replacement costs were adjusted so that the fund balance would approach the target balance. The main categories of revenues (from water rates, interest, and other operating) and expenditures (operations and maintenance costs, capital replacement and debt service) are shown in Table ES.2.

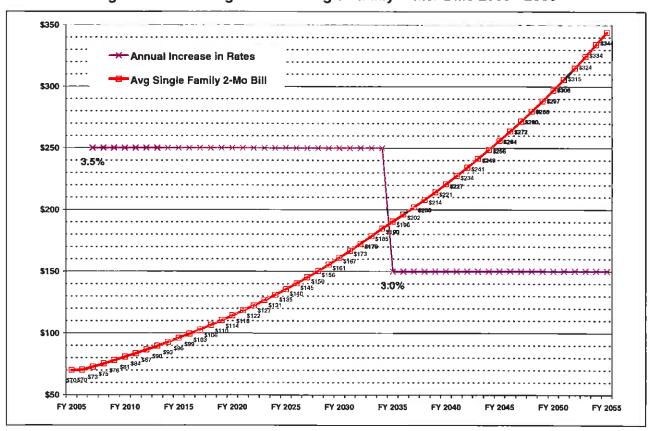

The impact of the projected water rate increases on an average bimonthly water bill for a single family customer, with a 5/8-inch water meter and 19 Ccf/two months of water use, is shown in Figure ES.2. Trends in the bimonthly water bill mimic trends in expenditures. That is, the annual increase in operating expenditures and the annual increase in capital replacement costs will

produce increases in water bills of a proportional magnitude. The average bimonthly water bill for a single family customer, approximately \$70 in FY 2006, would double about every 20 years.

Table ES.2 Water System Fund Balance Summary 2006 - 2055

Balance July 1, 2006	\$14,650,976	
Expenditures		Percent of Total
O&M	\$323,733,000	71%
Debt Service	\$13,312,025	3%
Capital Replacement	<u>\$119,957,526</u>	<u>26%</u>
Total Expenditures	\$457,002,551	100%
Revenues		Percent of Total
Water Rates	\$413,563,761	93%
Interest	\$18,976,650	4%
Other Revenue	\$13,983,186	<u>3%</u>
Total Revenue	\$446,523,597	100%
Net Income	-\$10,478,954	
Balance June 30, 2055	\$4,172,022	

Figure ES.2 Average Annual Single Family Water Bills 2005 - 2055

Wastewater Fund Summary

Revenue from wastewater rates is projected to account for approximately 99 percent of revenue for the wastewater system through FY 2055. The only other source of revenue will be interest earnings. The projected wastewater rate increases recommended as part of this financial evaluation are shown in Table ES.3.

Table ES.3 Recommended Wastewater Rate Increases

		Year		Year	
Rate Increase Recommendations	Increase	Start		End	Years
Increase 1	20.0%	2007	-	2008	2
Increase 2	7.0%	2009	-	2012	4
Increase 3	3.0%	2013	-	2055	43

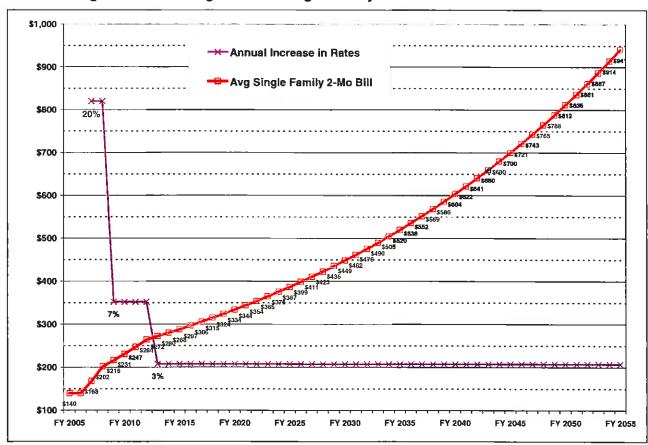

Revenues from wastewater rates and capital replacement costs were adjusted so that the fund balance would approach the target balance. The main categories of revenues (from wastewater rates and interest) and expenditures (operations and maintenance costs and capital replacement) are shown in Table ES.4.

The impact of the projected wastewater rate increases on wastewater bills is shown in Figure ES.3. Trends in the bimonthly wastewater bill are driven by the need to immediately begin incorporating capital replacement costs into the wastewater bill. If the large increases in wastewater bills for FY 2007 and FY 2008, and the series of high rate increases in FY 2009 – FY 2012, are decreased or postponed even greater increases will be necessary at a later time.

Table ES.4 Wastewater System Fund Balance Summary 2006 - 2055

Balance July 1, 2006	\$7,861	
Expenditures		Percent of Total
O&M	\$5,033,734	61%
Debt Service	\$0	0%
Capital Replacement	<u>\$3,164,003</u>	<u>39%</u>
Total Expenditures	\$8,197,738	100%
Revenues		Percent of Total
Wastewater Rates	\$8,196,030	99%
Interest	\$57,857	1%
Other Revenue	<u>\$0</u>	<u>0%</u>
Total Revenue	\$8,253,887	100%
Revenues - Expenditures	\$56,149	
Balance June 30, 2055	\$64,010

CHAPTER 1

INTRODUCTION

This report documents the development of a long term financial plan for the San Lorenzo Valley Water District (District). The purpose of the plan is to help ensure the fiscal vitality of the District's Water Fund and Sewer Fund. A separate financial plan is developed for each fund. This chapter describes the District's organization and operations, the objectives of the long term financial planning effort, the methodology used to develop the financial plans, and the spreadsheet created for financial calculations.

Organization and Operations

The District was established in 1941 pursuant to provisions in the California Water Code. It was created to develop a water supply for domestic requirements as well as for fire protection and recreational facilities in the San Lorenzo Valley (except the Felton area). The District contains approximately 58 square miles and serves approximately 5,750 water customers and 55 sewer customers. The District is governed by a five person Board of Directors elected to four year terms by registered voters throughout the District's boundaries.

Financial Statements²

The District produces financial statements that report information about the District using full accrual accounting methods as utilized by similar business activities in the private sector. However, rate-regulated accounting principles applicable to private sector utilities [enforced by the California Public Utilities Commission] are not used by government utilities. The financial statements include a statement of net assets; a statement of activities and changes in net assets; a statement of cash flows; and notes to financial statements. The financial statements were referenced in this study to provide a background into the District's cash and investments, long-term debt obligations, retained earnings, and enterprise funds income and expenses. Financial Statements as of June 30, 2005 and 2004 are included in Appendix A.

Since the activities of the District are, at this time, totally dedicated to providing services to the general public on a continuing basis, and its cost are to be financed or recovered primarily through user charges, its accounting records are required to be on a proprietary fund type basis. The District has two proprietary funds called enterprise funds. Enterprise funds are used to account for operations that are financed and operated in a manner similar to private business enterprises – where the intent of the governing body is that the costs (expenses, including depreciation) of providing goods or services to the general public on a continuing basis be financed or recovered primarily through user charges.

¹ Ensuring fiscal vitality is part of the District's Mission which states, "Our mission is to provide our customers and all future generations with safe, reliable and high quality drinking water at an equitable price; to create and maintain outstanding customer service; to manage and protect the environmental health of the aquifers and watersheds; and, to ensure the fiscal vitality of the San Lorenzo Valley Water District."

² Text for this section was quoted or paraphrased from the District's Independent Auditor's Report dated October 3, 2005, prepared by Berger/Lewis Accountancy Corporation.

The District has two proprietary funds – the Water Enterprise Fund and the Sewer Enterprise Fund. In this study, the development of a long-term financial plan for the District provides separate calculations, findings and recommendations for each enterprise.

Long Term Financial Plan Objectives

The primary objective of long term financial planning is to project annual water and sewer rates that will allow the District to pay operations expenditures and capital replacement expenditures while maintaining a prudent level of reserves.

The long term financial plan unifies the many separate planning efforts typically conducted by a water enterprise or sewer enterprise. Other types of planning or study efforts typically conducted include the following:

- Periodic master planning for replacement of assets (capital spending)
- Water resource planning (water supply and water use)
- Annual budgeting of expenditures and revenues (operational and other non-capital costs)
- Cost allocation studies (rate equity and rate structure)

The long term financial plan is not intended to supplant these other planning efforts. The long term financial plan is intended to be a rough approximation of the projected, cumulative impact of the other plans.

The study period for these financial plans is from Fiscal Years (FY) 2006 through 2055 (50 years). The length of the study period is appropriate given the nature of the water enterprise and sewer enterprise. The nature of these enterprises requires replacement of assets with useful lives that range from 10 - 70 years. Many of the assets must be replaced in their entirety and cannot be replaced piece by piece over time. The construction costs for replacement of assets are very high (for example, a 500,000 gallon water storage tank might cost \$1,000,000).

The key parameters in a long term financial plan for water and sewer enterprises are listed below:

- Projected revenues from rates
- Projected operating expenditures
- · Projected capital expenditures
- Projected reserves

Reserve Requirements

The water enterprise and sewer enterprise both should maintain a prudent level of operating and capital replacement reserves. These reserve requirements may be quantified by evaluating the cash flow requirements and the level of exposure to cash flow changes for each enterprise.

Capital Replacement Reserves. Every asset will eventually reach the end of its useful life, but waiting for an asset to fail before replacing the asset is not possible for most water and sewer system assets. Therefore, the timing of asset replacement (capital) expenditures is driven by the level of risk managers are willing to tolerate and the ability to finance each expenditure. Because the primary source of funds for all expenditures (capital and operating) is rates, and because capital expenditures are sporadic and expensive, the need for capital reserves as a mechanism for mitigating large rate increases is evident. In this study, an annual transfer to a capital replacement

fund is developed and funded by revenue from rates. All capital replacements are presumed to be funded on a pay-as-you-go basis with no issuance of debt.

Operating Reserves. In addition to asset replacement issues, other enterprise operating uncertainties exist and create significant financial uncertainties. Examples are:

- Loss of revenue from rates due to unplanned decreases in water sales (that are not offset by decreased operating costs) due to extremely wet winters or extremely cool summers
- Unplanned increases in operating costs (energy costs, chemical costs, labor costs, etc)
- Unplanned changes in cash flow (natural disasters that interrupt customer or vendor payments)

Given a reasonable assumption about the magnitude of each financial uncertainty, each event may be substantially mitigated through the maintenance of an appropriate amount of reserves. On top of all this are the operational issues for which an enterprise may plan – steady increases in operating costs, replacement of items with short useful lives (cars, computers, etc.), and growth.³

Methodology

The long term financial plan for each enterprise enables managers to determine the impact of combinations of changes in the key parameters noted above. Because there are many key parameters, many settings for each parameter and many years over which to vary the settings, the basis for setting parameters is to be prudent and reasonable and use past as prologue where appropriate.

In general, the long term financial plan for each enterprise involved the following tasks:

- Selection of annual growth rates in the number, type and usage level of customers
- Selection of annual growth rates in operating expenditures
- Selection of annual capital replacement expenditures
- Selection of annual target reserve levels
- Adjust annual rates increases to enable reserves to meet target levels

Based on the selections for each item, the goal was to project annual water and sewer rates that would allow the District to pay operations expenditures and capital replacement expenditures while maintaining a prudent level of reserves. The role of revenue from rates in the development of the long term financial plan is shown in Figure 1.1.

³ In many enterprises growth is uncertain, but in the District's case growth is known to be very limited.

Operations Expenditures

+

Revenue from Rates

Capital Expenditures

Maintain Fund Balance

Figure 1.1 Financial Planning Methodology

Source Data

The District provided all data used by the consultant in development of the long term financial plan. The data included the following:

- Current number of customers
- Current amount of water sales
- Current operational expenditures
- Current long-term debt obligations
- Current non-operating revenue
- Current revenue from rates
- Current replacement cost of assets
- Current fund balances

Current expenditure and revenue data is from revenue and expenditure summaries for FY 2006 and are shown in Appendix B. Water and sewer rates and charges currently in effect and previously in effect are shown in Appendix C.

Spreadsheet Calculations

A spreadsheet was developed for each long term financial plan that would accept the data for current conditions and allow the projection of future conditions. The spreadsheet was also used to produce all tables and figures used in this report.

The spreadsheet was developed using Microsoft Office Excel 2003 (Service Pack 2) software.

CHAPTER 2

WATER ENTERPRISE LONG TERM FINANCIAL PLAN

This chapter describes the long term financial plan for the water system. The long term financial plan description includes a summary of revenues and expenditures over the time period FY 2006 – FY 2055 and projected annual rate increases that produce revenues sufficient to meet expenditures.

Current and Projected Water Accounts

The current number of water accounts and annual water sales were used to develop annual projections for the time period ending in FY 2055. The number of accounts by customer class and meter size are shown in Table 2.1. Figure 2.1 shows accounts by customer class and Figure 2.2 shows accounts by meter size. For the purpose of projecting revenue from service charges, only the meter size is relevant so projections of the number of meters shows only meter sizes. The projected number of meters for FY 2006 – FY 2055 is shown in Table 2.2.

Current and Projected Water Sales

The amount of water sales for FY 2006 by tier for each customer class are shown in Table 2.3. Detailed water use data used to produce Table 2.3 is shown in Appendix D. Figure 2.3 shows water sales by tier summarized for all users. Figure 2.4 shows water sales by tier for only residential customers for the six, two-month periods ending in April 2006. For the purpose of projecting rate revenue from water sales, the water sales in each tier must be projected. The projected amount of water sales by tier for each customer class is shown in Table 2.4.

Summary of Projected Accounts and Sales

The projected annual number of water meters by meter size shown in Table 2.3 and the projected annual amount of water sales by tier for each customer class shown in Table 2.4 are summarized in Figure 2.5 and Figure 2.6. These figures and the table below make evident the impact of changes in the annual increases in accounts and water sales. Projections used in this study reflect a low, steady growth in water sales and a gradual decline in average water use.

	Esti	mated Average	Use
Variable Values and Results Categories	Lower	Projected	Higher
Variables			
Value in FY 2008-2055			
Annual Increase in Single Family Accounts	0.5%	0.5%	0.5%
Annual Increase in All Water Sales	0.0%	0.3%	0.4%
Results			
Average Water Sales, Ccf/Acct/2-Months			
Value in FY 2007	22.4	22.4	22.4
Value in FY 2055	18.1	20.9	22.4
Percent Change	-19%	-7%	0%
Change in Total Water Sales			
Value in FY 2007	772,059	772,059	772,059
Value in FY 2055	772,059	891,447	954,998
Percent Change	0%	15%	24%

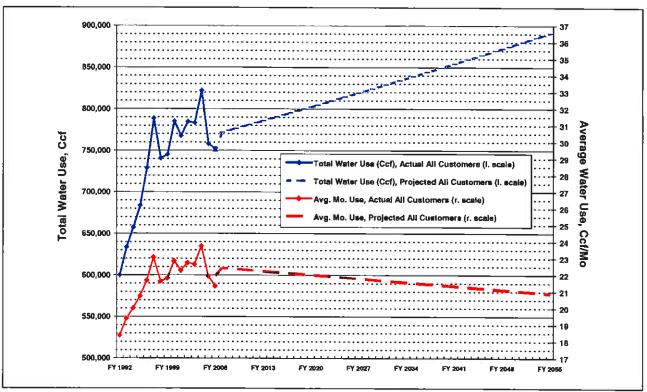

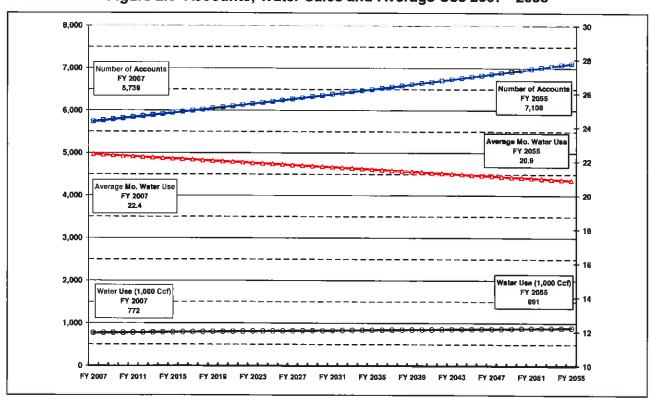

Figure 2.5 Total and Average Water Sales 1992 - 2055

Water Rates and Revenue from Water Rates

Revenue from water rates is projected to account for over 90 percent of revenue for the water system through FY 2055. The projected rate increases recommended as part of this financial evaluation are explained in more detail later in this chapter. The projected rate increases and the commensurate basic (meter) service charges and usage charges are shown in Table 2.5 and summarized in the table below.

Rate Increase Recommendations	Increase	Year Start		Year End	Years
Hate increase necommendations	increase	Start		End	<u>rears</u>
Increase 1	3.5%	2007	-	2034	28
Increase 2	3.0%	2035	-	2055	21

The amount of revenue from the projected rate increases is shown in Table 2.6 for basic (meter) service charges and Table 2.7 for usage charges. The average monthly water bill for a single family customer, with a 5/8-inch water meter and 19 Ccf/month of water use, based on the projected rates, is shown in Table 2.8.

Water System Revenues

In addition to revenue from water rates discussed in the previous paragraph the water fund has revenues from interest earnings, assessments, property taxes and other miscellaneous sources that currently make up about 26 percent of total water fund revenue. A list of the revenue sources for FY 2005 (including revenue from water rates but excluding interest earnings) is shown in Table 2.9.

The sources of revenue shown in Table 2.9, except for revenue from water fees and interest earnings, were projected to remain at current levels through FY 2055. This projection is only moderately conservative. While revenue from some of these sources could likely increase (for example, assessments), the chance that revenue from property taxes could decrease is even more likely (but still unpredictable).

Revenue from interest earnings is projected to decrease steadily over the study period as the water fund balance gradually decreases.

Water system revenue projections for FY 2006 – FY 2055, except for revenues from interest earnings which are shown in a table along with projected fund balances, are shown in Table 2.10. Water system revenues projected for FY 2006 are shown in Figure 2.7.

Water System Expenditures

Water system expenditures include operations and maintenance expenses, debt service and capital replacement costs. Water system expenditures projected for FY 2006 are shown in Figure 2.8. Operations and maintenance expenses for FY 2006 were based on actual values from FY 2005 which are shown in Table 2.9. Projections for FY 2006 – FY 2055 are shown in Table 2.10. The projected values reflect an annual three percent increase, except for FY 2006 salaries and expenses, and professional services, which reflect higher expected increases.

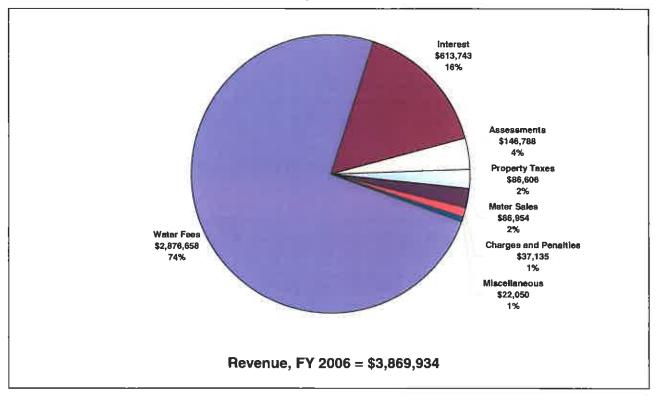

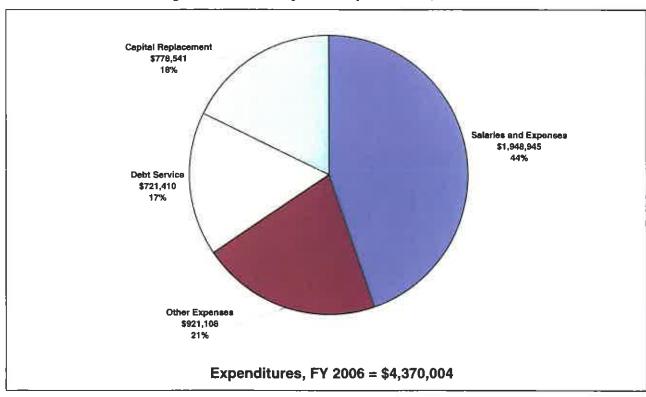

Figure 2.7 Water System Revenues, FY 2006

Debt Service

As of the beginning of FY 2006, the District had approximately \$13,300,000 of debt service payments remaining with seven issuers. The last payment is scheduled for FY 2021. Between FY 2007 and FY 2016 (ten years) annual principal and interest payments are approximately \$950,000. Annual debt service is shown in Table 2.11. No new debt service is projected as part of the long term financial plan.

Capital Replacement Costs

Capital replacement costs are those costs related to replacement of assets as the assets fail, wear out or become obsolete. The District spent about \$780,000 for capital replacement in FY 2006. For the purpose of projecting annual expenditures for capital replacement, an approach which approximates the cost to replace assets over the duration of the study period was developed. The approach is based on developing the current replacement cost for the water system and recovering that cost incrementally over the useful life of the water system while accounting for inflation. Table 2.12 shows the development of the FY 2006 replacement cost for the water system. Figure 2.9 shows the FY 2006 replacement cost of the water system for each major system component.

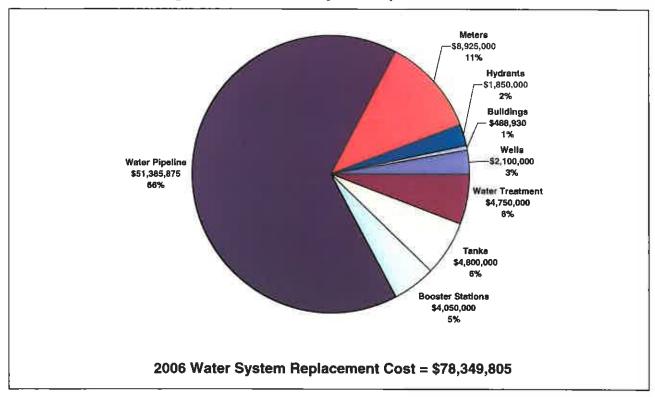

Figure 2.9 2006 Water System Replacement Cost

¹ Depreciation is sometimes (mistakenly) equated with the attempt to capture the cost of capital asset replacement. Depreciation is not used in this study because it is based upon the original cost of assets. The best method of estimating asset replacement costs is to project the cost to replace each asset in the year in which it is expected to be replaced. For the purposes of this study an approach which approximates the replacement cost method is used.

The annual cost to replace capital assets is shown in Table 2.12 to be approximately \$3,100,000. Based on an approach which approximates the cost to replace assets over the duration of the study period, the annual replacement cost would be spent on capital replacement projects as they occur or, if not totally spent in a given year, transferred to a reserve and accumulated for capital replacement projects of assets with longer useful lives or that are replaced all at once and not gradually over time. Figure 2.10 shows the annual replacement capital cost of the water system for each major system component.

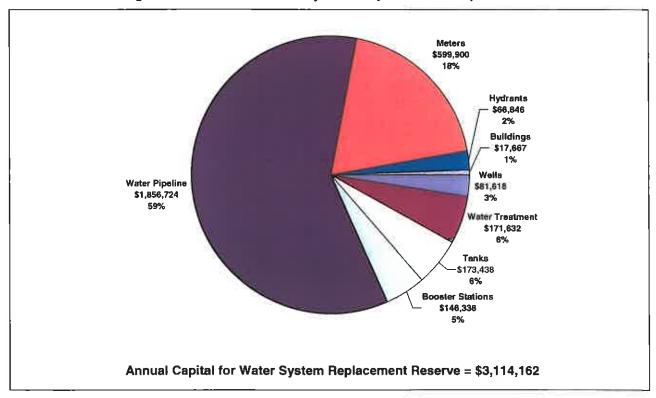

Figure 2.10 Annual Water System Replacement Capital Cost

The replacement cost of the water system, approximately \$78,000,000 in FY 2006, would double about every 24 years if construction costs increase at three percent per year between FY 2006 and FY 2055. In other words, the replacement cost of the water system would be approximately \$159,000,000 in FY 2030 and approximately \$324,000,000 in FY 2054. These projections may be on the low side, that is the three percent annual increase in construction costs may be exceeded by the actual increases in constructions costs. The projected replacement cost of the water system puts the annual \$3,100,000 budget for replacement costs in perspective.

The annual capital replacement costs used in the long term financial plan are not \$3,100,000. The impact on water rates was deemed to be too extreme to immediately shift from the current capital replacement expenditure level, \$780,000 in FY 2006, to \$3,100,000. Instead, the annual capital replacement costs to be recovered from rates are increased gradually from the current level.

The cumulative amount of capital replacement costs to be recovered from rates and transferred to a separate fund (or spent on capital replacement projects) is shown in Figure 2.11. Also shown in the figure is the total target amount of transfers. The total target amount of transfers, approximately \$155,000,000, is the annual amount (approximately \$3,100,000) times 50 years. The difference between cumulative amount of capital replacement costs to be recovered from rates and the total target amount of transfers reflects a need to either increase capital replacement costs to be recovered from rates in later years, fund some capital projects through issuance of debt, or postpone some capital replacement projects.

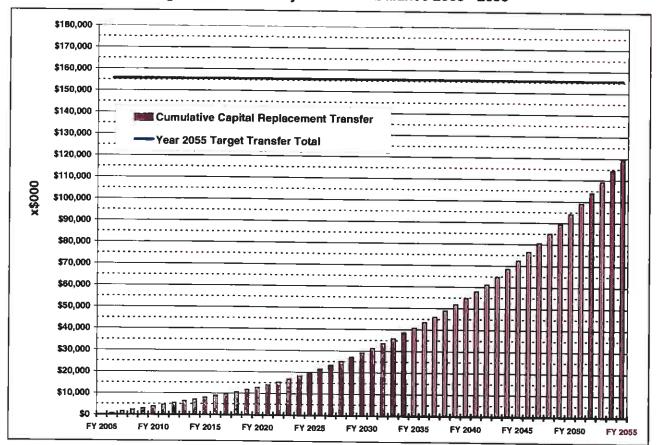

Figure 2.11 Water System Fund Balance 2005 - 2055

Target Fund Balance

An annual target fund balance was developed (exclusive of those amounts to be transferred to a reserve for capital replacements or spent on capital replacements). The target fund balance has three components – working capital, rate stabilization and emergency. Development of the target fund balance for each year is shown in Table 2.13. The working capital component is for fluctuations in day to day cash received from accounts receivable versus cash paid to accounts payable. The rate stabilization component enables the District to meet cash requirements in times when revenue from water sales is less than planned. The emergency component enables the District to better meet cash requirements during emergencies.

Each component of the target fund balance is additive and reflects the chance that all three situations for which the components are developed may occur simultaneously. The target fund balance and the projected fund balance are shown in Figure 2.12. The projected fund balance is discussed in the next section.

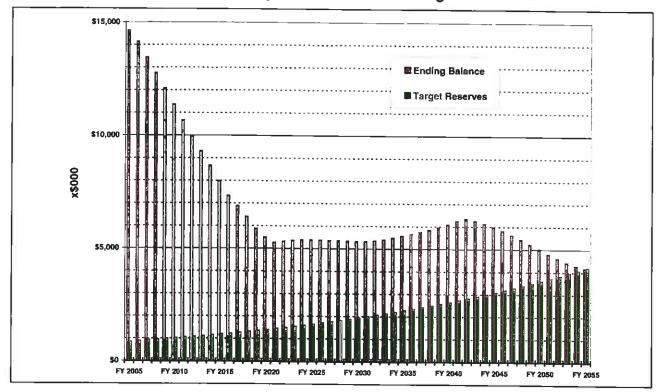

Figure 2.12 Water System Fund Balance Target 2005 - 2055

Projected Fund Balance

The annual amounts of revenues and expenditures described in the previous sections were used in Table 2.14 to develop an annual fund balance. Revenues from water rates and capital replacement costs were adjusted so that the fund balance would approach the target balance. The main categories of revenues (from water rates, interest, and other operating) and expenditures (salaries and labor costs, other operating costs, capital replacement and debt service) are shown in Figure 2.13 along with the ensuing fund balance.

The annual amounts of revenues and expenditures from FY 2006 through FY 2055 for each main category were added and are summarized in Table 2.15. The significant points to be derived from the summary are:

- O&M expenditures (salaries, labor and other operating costs) are 71% of all expenditures
- Capital replacement expenditures (about \$120,000,000) are 26% of all expenditures
- Revenue from water rates is 93% of all revenue

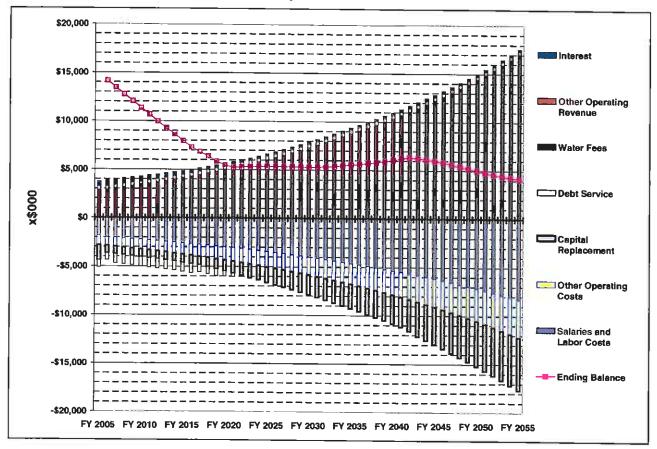

Figure 2.13 Water System Fund Balance 2005 - 2055

Table 2.15 Water System Fund Balance Summary 2006 - 2055

Balance July 1, 2006	\$14,650,976

Other Revenue	\$13,983,186	<u>3%</u>
Total Revenue	\$446,523,597	100%
Net Income	-\$10,478,954	
Balance June 30, 2055	\$4,172,022	

Single Family Water Bills

The impact of the projected water rate increases on the single family customer class were evaluated in Table 2.8. In that table the average bimonthly water bill for a single family customer, with a 5/8-inch water meter and 19 Ccf/two months of water use, is shown. Figure 2.14 shows the annual average bimonthly water bill for a single family customer and the annual percentage increase in water rates.

Trends in the bimonthly water bill mimic trends in expenditures. That is, the annual increase in operating expenditures plus the annual increase in capital replacement costs will produce increases in water bills of a proportional magnitude. The average bimonthly water bill for a single family customer, approximately \$70 in FY 2006, would double about every 20 years.

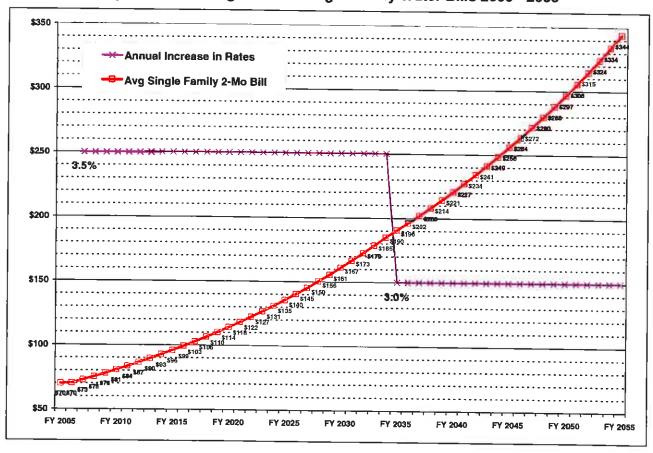

Figure 2.14 Average Annual Single Family Water Bills 2005 - 2055

Notes:

Source:

Metered Sales was provided by the District

Usage in each tier was estimated for each customer class and Salesd to develop estimated revenue.

a. Percentages were based on water sales data for the time period May 2005 - April 2006. Detailed data is included in Appendix D.

b. Water sales totals for each customer class were provided by the District from the monthly "control report by user code".

The totals amounts were then distributed among tiers based on the percentages for each tier.

BOOSTER STATIONS				27	Count	\$4,050,000				\$146,338
METERS				5,950	Count	\$8,925,000				\$599,900
BUILDINGS				2	Count	\$488,930				\$17,667
TOTAL						\$78,349,805				\$3,114,162

Notes:

- a. The capacity factor is the fraction of the replacement cost that must be recovered annually over the useful life of the asset. For example, if the inflation rate were 0%, an asset with a useful life of 20 years would have a capital recovery factor of 0.05 (1 divided by 20). Increasing the inflation rate increases the capital recovery factor.
- b. Water lines between 1-inch and 4-inch diameter will be replaced with 6-inch diameter pipe.
- c. The unit replacement cost for buildings is allocated between the water and sewer funds based on the relative replacement costs for the other assets in each system.

- The rate stabilization target is the percent of water use revenue that may decrease due to adverse weather conditions.
- c. The emergency target is a percent of operating expenditures based on financial cash flow risk due to natural disasters.

CHAPTER 3

WASTEWATER ENTERPRISE LONG TERM FINANCIAL PLAN

This chapter describes the long term financial plan for the wastewater system. The long term financial plan description includes a summary of revenues and expenditures over the time period FY 2006 – FY 2055 and projected annual rate increases that produce revenues sufficient to meet expenditures.

Current and Projected Wastewater Accounts

The current number of wastewater accounts is 55. All accounts are residential accounts and are charged the same rate. The projected number of accounts for FY 2007 – FY 2055 is projected to remain at the current level.

Wastewater Rates and Revenues

Revenue from wastewater rates is projected to account for approximately 99 percent of revenue for the wastewater system through FY 2055. The only other source of revenue will be interest earnings. The projected rate increases recommended as part of this financial evaluation are explained in more detail later in this chapter. The projected rate increases and the commensurate sewer charges are shown in Table 3.1 and summarized in the table below.

Rate Increase Recommendations	Increase	Year Start		Year End	Years
Increase 1	20.0%	2007	-	2008	2
Increase 2	7.0%	2009	-	2012	4
Increase 3	3.0%	2013	-	2055	43

Wastewater System Expenditures

Wastewater system expenditures include operations and maintenance expenses and capital replacement costs. Wastewater system operations and maintenance expenses for FY 2006 were based on actual values from FY 2005 which are shown in Table 3.2. Projections for FY 2006 – FY 2055 are shown in Table 3.3. The projected values reflect an annual three percent increase, except for FY 2006 salaries and expenses, and professional services, which reflect higher expected increases.

Capital Replacement Costs

Capital replacement costs are those costs related to replacement of assets as the assets fail, wear out or become obsolete. The District had no capital replacement expenditures in FY 2006. For the purpose of projecting annual expenditures for capital replacement, an approach which

¹ Depreciation is sometimes (mistakenly) equated with the attempt to capture the cost of capital asset replacement. Depreciation is not used in this study because it is based upon the original cost of assets. The best method of estimating asset replacement costs is to project the cost to replace each asset in the year in which it is expected to be replaced. For the purposes of this study an approach which approximates the replacement cost method is used.

approximates the cost to replace assets over the duration of the study period was developed. The approach is based on developing the current replacement cost for the wastewater system and recovering that cost incrementally over the useful life of the wastewater system while accounting for inflation. Table 3.4 shows the development of the FY 2006 replacement cost for the wastewater system. Figure 3.1 shows the FY 2006 replacement cost of the wastewater system for each major system component.

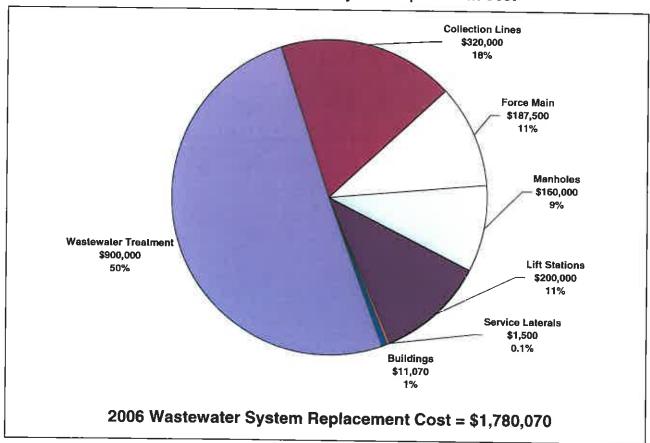

Figure 3.1 2006 Wastewater System Replacement Cost

The annual cost to replace capital assets is shown in Table 3.4 to be approximately \$71,500. Based on an approach which approximates the cost to replace assets over the duration of the study period, the annual replacement cost would be spent on capital replacement projects as they occur, if not totally spent in a given year, transferred to a reserve and accumulated for capital replacement projects of assets with longer useful lives that are replaced all at once and not gradually over time. Figure 3.2 shows the annual replacement capital cost of the wastewater system for each major system component.

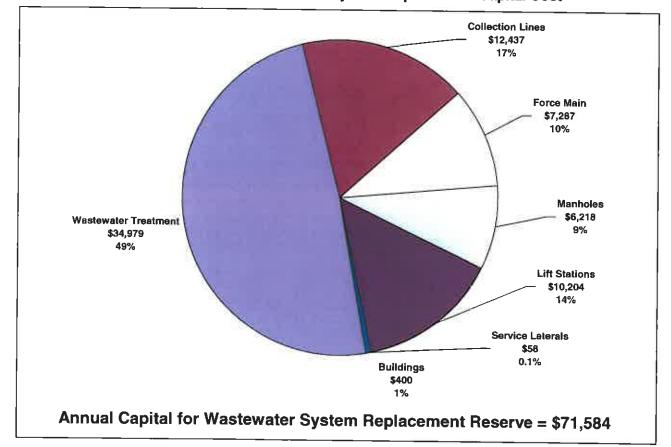

Figure 3.2 Annual Wastewater System Replacement Capital Cost

The replacement cost of the wastewater system, approximately \$1,800,000 in FY 2006, would double about every 24 years if construction costs increase at three percent per year between FY 2006 and FY 2055. In other words, the replacement cost of the wastewater system would be approximately \$3,600,000 in FY 2030 and approximately \$7,200,000 in FY 2054. These projections may be on the low side, that is the three percent annual increase in construction costs may be exceeded by the actual increases in constructions costs. The projected replacement cost of the wastewater system puts the annual \$71,500 budget for replacement costs in perspective.

The annual capital replacement costs used in the long term financial plan are not \$71,500. The impact on wastewater rates was deemed to be too extreme to immediately shift from the current capital replacement expenditure level, \$0 in FY 2006, to \$71,500. Instead, the annual capital replacement costs to be recovered from rates are increased gradually from the current level.

The cumulative amount of capital replacement costs to be recovered from rates and transferred to a separate fund (or spent on capital replacement projects) is shown in Figure 3.3. Also shown in the figure is the total target amount of transfers. The total target amount of transfers, approximately \$3,600,000, is the annual amount (approximately \$71,000) times 50 years. The difference between cumulative amount of capital replacement costs to be recovered from rates and the total target amount of transfers reflects a need to either increase capital replacement

costs to be recovered from rates in later years, fund some capital projects through issuance of debt, or postpone some capital replacement projects.

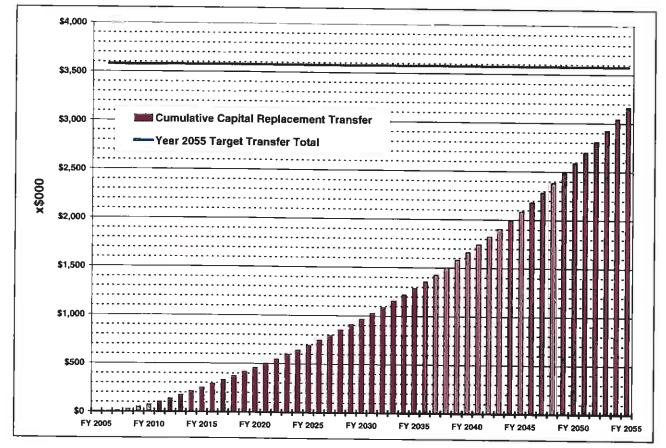

Figure 3.3 Wastewater System Fund Balance 2005 - 2055

Target Fund Balance

An annual target fund balance was developed (exclusive of those amounts to be transferred to a reserve for capital replacements or spent on capital replacements). The target fund balance has three components – working capital, rate stabilization and emergency. Development of the target fund balance for each year is shown in Table 3.5. The working capital component is for fluctuations in day to day cash received from accounts receivable versus cash paid to accounts payable. The rate stabilization component enables the District to meet cash requirements in times when revenue from wastewater rates is less than planned. The emergency component enables the District to better meet cash requirements during emergencies.

Each component of the target fund balance is additive and reflects the chance that all three situations for which the components are developed may occur simultaneously. The target fund balance and the projected fund balance are shown in Figure 3.5. The projected fund balance is discussed in the next section.

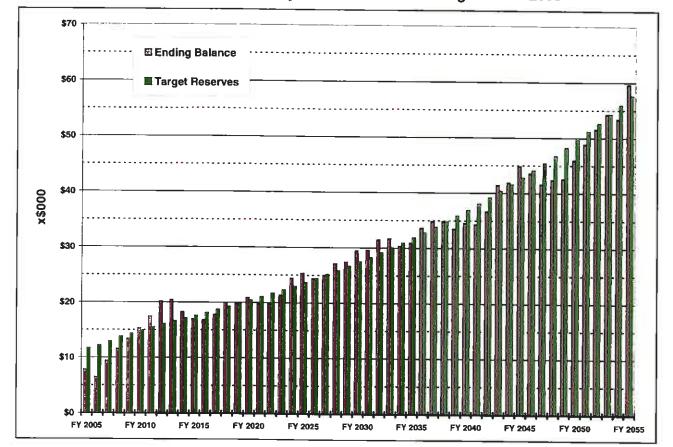

Figure 3.5 Wastewater System Fund Balance Target 2005 - 2055

Projected Fund Balance

The annual amounts of revenues and expenditures described in the previous sections were used in Table 3.5 to develop an annual fund balance. Revenues from wastewater rates and capital replacement costs were adjusted so that the fund balance would approach the target balance. The main categories of revenues (from wastewater fees and interest) and expenditures (salaries and labor costs, other operating costs and capital replacement) are shown in Figure 3.6 along with the ensuing fund balance.

The annual amounts of revenues and expenditures from FY 2006 through FY 2055 for each main category were added and summarized in Table 3.7. The significant points to be derived from the summary are:

- O&M expenditures (salaries, labor and other operating costs) are 61% of all expenditures
- Capital replacement expenditures (about \$3,164,000) are 39% of all expenditures
- Revenue from wastewater rates is 99% of all revenue

Balance June 30, 2055	\$64,010	

Wastewater Bills

The impact of the projected wastewater rate increases on wastewater bills were evaluated in Table 3.1. In that table, the average bimonthly wastewater bill based on the projected rates was shown. Figure 3.7 shows the annual average bimonthly wastewater bill and the annual percentage increase in wastewater rates.

Trends in the bimonthly wastewater bill are driven by the need to immediately begin incorporating capital replacement costs into the wastewater bill. If the large increases in wastewater bills for FY 2007 and FY 2008, and the series of high rate increases in FY 2009 – FY 2012, are decreased or postponed even greater increases will be necessary at a later time.

Table 3.4 List of Wastewater Assets and Replacement Costs, 2006

Asset Classification	Asset Name	Notes	Number or Size	Units	Unit Replacement Cost	Total Replacement Cost	Useful Life Years	Estimated Inflation Rate	Capital Recovery Factor (a)	Annual Capital Recovery
COLLECTION LINES	6.00-Inch diameter		3,200	Lineal Foot	\$100.00/LF	\$320,000	50	3.0%	0.0389	\$12,437
FORCE MAIN	4.00-inch diameter		2,500	Lineal Foot	\$75.00/LF	\$187,500	50	3.0%	0.0389	\$7,287
WASTEWATER TREAT	TMENT	•	1	each	\$900,000	\$900,000	50	3.0%	0.0389	\$34,979
MANHOLES			16	each	\$10,000	\$160,000	50	3.0%	0.0389	\$6,218
LIFT STATIONS		<u> </u>	2	each	\$100,000	\$200,000	30	3.0%	0.0510	\$10,204
SERVICE LATERALS			60	each	\$25	\$1,500	50	3.0%	0.0389	\$58
BUILDINGS		(b)	2	each	\$500,000	\$11,070	60	3.0%	0.0361	\$400
Summary		-	•		-					
COLLECTION LINES				3,200	Lineal Foot	\$320,000				\$12,437
FORCE MAIN				1	Lineal Foot	\$187,500				\$7,287
WASTEWATER TREAT	TMENT			1	Count	\$900,000				\$34,979
MANHOLES				16	Count	\$160,000				\$6,218
LIFT STATIONS				2	Count	\$200,000				\$10,204
SERVICE LATERALS				60	Count	\$1,500				\$58
BUILDINGS				2	Count	\$11,070				\$400
TOTAL						\$1,780,070				\$71,584

Notes:

b. The unit replacement cost for buildings is allocated between the water and sewer funds based on the relative replacement costs for the other assets in each system.

<u>Water</u>	<u>Sewer</u>	<u>Total</u>
\$78,135,000	\$1,769,000	\$79,904,000
97.8%	2.2%	

a. The capacity factor is the fraction of the replacement cost that must be recovered annually over the useful life of the asset.

For example, If the inflation rate were 0%, an asset with a useful life of 20 years would have a capacity factor of 0.05 (1 divided by 20).

Increasing the inflation rate increases the capacity factor.

Notes: a. The working capital target Is a percent of operating expenditures based on days of coverage: days of working c calendar days in % working capital	apital > 1 year >	45 365 12.3%	45 366 12.3%	45 365 12.3%	45 365 12.3%	45 365 12.3%	45 366 12.3%	45 365 12.3%	45 365 12.3%	45 365 12.3%	45 366 12.3%	45 365 12.3%	45 365 12.3%	45 365 12.3%		365	45 365 12.3%	45 365 12.3%

- The rate stabilization target is the percent of water use revenue that may decrease due to adverse weather conditions.
- c. The emergency larget is a percent of operating expenditures based on financial cash flow risk due to natural disasters.

INDEPENDENT AUDITOR'S REPORT

Board of Directors San Lorenzo Valley Water District Boulder Creek, California

We have audited the accompanying general-purpose financial statements of San Lorenzo Valley Water District as of June 30, 2005 and 2004 as listed in the table of contents. The financial statements are the responsibility of San Lorenzo Valley Water District's management. Our responsibility is to express an opinion on the financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As more fully described in Note 2 to the financial statements, the audit did not include tests of the historical costs of property and equipment acquired prior to July 1, 1986 because complete records are not available. Accordingly, we do not express an opinion as to the fairness of presentation of property and equipment, accumulated depreciation and equity in plant and equipment.

In our opinion, except for fixed assets, the general purpose financial statements referred to above present fairly, in all material respects, the financial position of San Lorenzo Valley Water District as of June 30, 2005 and 2004, and results of its operations and cash flows in conformity with accounting principles generally accepted in the United States of America.

Our report was made for the purpose of forming an opinion on the basic financial statements taken as a whole. The information presented on pages 22 through 24 is presented for purposes of supplementary information, and is not a required part of the basic financial statements. Such information for the year ended June 30, 2005 has been subjected to the auditing procedures applied in the audit of the basic financial statements and, in our opinion, is fairly stated in all material respects in relation to the basic financial statements taken as a whole.

Board of Directors San Lorenzo Valley Water District Page 2

The Management's Discussion and Analysis information and budgetary comparison information as listed the table of contents is not a required part of the basic financial statements but is supplementary information required by the Governmental Accounting Standards Board. We have applied certain limited procedures, which consisted principally of inquiries of management regarding the methods of measurement and presentation of the supplementary information. However, we did not audit the information and express no opinion on it.

MANAGEMENT'S DISCUSSION AND ANALYSIS

June 30, 2005

<u>Mission</u>

Our mission is to provide our customers and all future generations with reliable, safe and high quality water at an equitable price; to create and maintain outstanding customer service; to manage and protect the environmental health of the aquifers and watersheds; and, to ensure the fiscal vitality of the San Lorenzo Valley Water District. This section of the District's financial report presents our discussion and analysis of the District's financial performance during the fiscal year that ended on June 30, 2005.

Description of the Basic Financial Statements

Management's Discussion and Analysis (MD&A) serves as an introduction to the basic financial statements and supplementary information. The MD&A represents management's examination and analysis of the District's financial condition and performance. Summary financial statement data, key financial and operational indicators used in the Authority's strategic plan, budget, bond resolutions and other management tools were used for this analysis.

The financial statements report information about the District using full accounting methods as utilized by similar business activities in the private sector. However, rate-regulated accounting principles applicable to private sector utilities are not used by government utilities.

The financial statements include a statement of net assets; a statement of activities and changes in net assets; a statement of cash flows; and notes to financial statements. The statement of net assets presents the financial position of the District on a full accrual historical cost basis. While the statement of net assets provides information about the nature and amount of resources and obligations at year-end, the statement of revenues, expenses, and changes in net assets presents the results of the business activities over the course of the fiscal year and information as to how the net assets changed during the year. All changes in net assets are reported as soon as the underlying event giving rise to the change occurs, regardless of the timing of the related cash flows.

The statement of cash flows presents changes in cash and cash equivalents, resulting from operational, financing, and investing activities. This statement presents cash receipts and cash disbursement information, without consideration of the earnings event, when an obligation arises, or depreciation of capital assets.

The notes to the financial statements provide required disclosures and other information that are essential to a full understanding of material data provided in the statements. They present information about the District's accounting policies, significant account balances and activities, material risks, obligations, commitments, contingencies and subsequent events, if any. In addition, supplementary information comparing the budget to actual expenses is presented.

The financial statements were prepared by the District's staff from the detailed books and records of the District. The financial statements were audited and adjusted, if material, during the independent external audit process.

Financial Analysis of the District as a Whole

For fiscal year 2004-2005 the District ended the year with Net Assets of \$26,352,520. Of this amount \$11,819,002 was invested in Capital Assets, net of related debt; \$1,468,326 was restricted for specific capital activity or debt service; \$13,065,192 was unrestricted. The Board of Directors has designated a portion of the unrestricted Net Assets as described in Note 10 to the financial statements.

For fiscal year 2004-2005 Net Operating Income (Loss) was (\$350,662), Non-Operating Income (Expense) was \$150,322, resulting in a net (\$200,340) loss for the year.

MANAGEMENT'S DISCUSSION AND ANALYSIS

June 30, 2005

Budgetary Highlights - Water Fund

For fiscal year 2004-2005 Water Fund Total Operating Income was less than approved budget projections by \$221,148 (6.36%). This variance was primarily due to property taxes being \$119,394 (57.96%) less than anticipated and water fees being \$157,231 (5.18%) less than anticipated.

For fiscal year 2004-2005 Water Fund Total Operating Expenses exceeded approved budget projections by \$812,386 (29.3%). Although some operating expense categories were less than expected, amortization and depreciation in the amount of \$886,132 were not originally budgeted, accounting for the majority of the overall variance. In addition, three (3) capital projects were classified as expense rather than fixed assets. The three (3) capital projects classified as expense were the Cal-Am Rate Case (\$4,311) the Aerial Photography Project (\$39,592), and the Camp Evers Groundwater Evaluation Project (\$11,076).

For fiscal year 2004-2005 Water Fund Total Non-Operating Income was \$150,322. This sum is approximately 17% less than approved projections due to a declining trend in investment market earnings.

Budgetary Highlights - Sewer Fund

For fiscal year 2004-2005 Sewer Fund Total Operating Income exceeded approved budget projections by \$85 (.18%).

For fiscal year 2004-2005 Sewer Fund Total Operating Expenses exceeded approved budget projections by \$30,913 (74.35%). This variance was primarily due to the fact that amortization and depreciation were not budgeted.

For fiscal year 2004-2005 Sewer Fund Total Non-Operating Income for the sewer fund had zero variance since there was zero budgeted and zero actual expenses.

Capital Assets

As of June 30, 2005 the District had invested \$27,948,098 in a broad range of capital assets including land, structures and improvements, machinery and equipment.

This year's major capital asset additions included:

Machinery and Equipment	\$ 39,569
Building & Building Improvements	\$ 753,696
Office Equipment and Furniture	\$ 24,332
Transportation Equipment	\$ 31,393
Wells	\$ -
Pumping Plant Improvements	\$ -
New Mains and Extensions	\$ -
Main Replacements	\$ 122,313
Water Meters and Registers	\$ 25,277

MANAGEMENT'S DISCUSSION AND ANALYSIS

June 30, 2005

District's Capitalization Policy

The San Lorenzo Valley Water District currently does not have a formal written Capitalization Policy for financial statement purposes. Current District policy provides that all capital assets in excess of \$500 are recorded as fixed assets. District staff is currently in the process of developing a revised Asset Management Program. The revised Asset Management Program will be in compliance with reporting requirements established by Government Accounting Standards Board (GASB) statements number 34 and number 35, Basic Financial Statements and Management's Discussion and Analysis for State and Local Governments and Public Colleges and Universities. Included in the revised Asset Management Program will be specific written policies regarding asset category definitions, capitalization thresholds, depreciation methodologies and guidelines for financial statement purposes. Estimated completion date for the revised Asset Management Program is June 30, 2006.

Long-Term Liabilities

The District's long-term liabilities (net of current portion) was \$6,293,317 at the end of the fiscal year ending June 30, 2005. This amount consisted of the following debt:

Special Assessment Bonds	\$ 930,000
California Special District Lease Financing	165,000
Notes Payable	3,380,616
Certificates of Participation Refunding Payment Agreement	2,200,000
Less: Current Portion	 (382,299)
Total	\$ 6,293,317

During the year ended June 30, 2005 the District refinanced the 1998 Certificates of Participation Issuance through a refunding agreement that dropped the associated interest rate from 5.43% to 4.25% as described in Note 5 to the financial statements.

The District's debt decreased by approximately \$447,420 during fiscal year 2004-2005 due primarily to regularly scheduled debt service payments.

Economic Factors and Next Year's Budget

For fiscal year 2004-2005 and fiscal year 2005-2006 the San Lorenzo Valley Water District will experience an annual reduction in ad valoreum property tax revenue of approximately \$340,000 per year. This represents a reduction in property tax revenues from approximately \$380,000 per year to \$40,000 per year (90%). Property tax revenue generally represents approximately 10% of the District's total recurring revenue.

The loss of revenue is the direct result of a large deficit in the State of California budget for fiscal year 2004-2005. As a result of the State budget deficit, an agreement was approved to temporarily shift \$350 million annually for two years in property tax revenue that would normally go to special districts to the state. The San Lorenzo Valley Water District is an enterprise special district.

For fiscal year 2004-2005 and fiscal year 2005-2006, the District offset the loss of property tax revenue due to this revenue shift agreement (approximately \$340,000) with investment earnings from the prior sale of the District's Waterman Gap property.

Contacting the District's Financial Management

This financial statement is designed to provide a general overview of the District's finances. If you have any questions about this financial statement or need additional information, contact the District's office at 13060 Highway 9, Boulder Creek, California 95006, telephone number (831) 338-2153, facsimile (831) 338-7986.

NOTES TO FINANCIAL STATEMENTS

June 30, 2005 and 2004

ORGANIZATION:

The San Lorenzo Valley Water District was established April 3, 1941, pursuant to Chapter 592, Status of 1913, since codified into Section 30,000 et seq. of the California Water Code. The District contains approximately 58 square miles. It was created to develop a water supply for domestic requirements as well as for fire protection and recreational facilities in the San Lorenzo Valley (except the Felton area). Since 1969, the District has owned and operated some facilities in Bear Creek Estates. At June 30, 2005, the District owned approximately 2,030 acres of land and was servicing approximately 5,750 customers.

<u>Board of Directors</u> - The San Lorenzo Valley Water District is governed by a five person Board of Directors elected to four-year terms by registered voters throughout the District's boundaries. The Board is responsible for the establishment of policy on the District's mission, goals and operations.

The Board of Directors and expiration of their term, as of June 30, 2005, are as follows:

Terry Vierra, President	December, 2006
James Nelson, Vice-President	December, 2008
David Ross, Director	December, 2008
Larry Prather, Director	December, 2006
James Rapoza, Director	December, 2006

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES:

Change in Accounting Principles - During the year ended June 30, 2004, the District adopted Governmental Accounting Standards Board Statement No. 34, Basic Financial Statements — and Management's Discussion and Analysis — for State and Local Governments. Statement No. 34 establishes certain reporting requirements that are designed to make governmental annual reports more comprehensive. For enterprise funds, while presentation has changed, the underlying financial information has not. Statement No. 34 also requires that Management's Discussion and Analysis, an overview to the Group's financial activities, be presented before the financial statements as required supplementary information.

<u>Fund Accounting</u> - Since the activities of the District are, at this time, totally dedicated to providing services to the general public on a continuing basis, and its costs are to be financed or recovered primarily through user charges, its accounting records are required to be on a proprietary fund type basis. In conformance with generally accepted accounting principles (GAAP), the appropriate fund type and category is defined as follows:

<u>Proprietary Funds - Enterprise Funds</u> - Enterprise funds are used to account for operations (a) That are financed and operated in a manner similar to private business enterprises - where the intent of the governing body is that the costs (expenses, including depreciation) of providing goods or services to the general public on a continuing basis be financed or recovered primarily through user charges; or (b) Where the governing body has decided that periodic determination of revenues earned, expenses incurred, and/or net income is appropriated for capital maintenance, public policy, management control, accountability or other purposes.

NOTES TO FINANCIAL STATEMENTS (Continued)

June 30, 2005 and 2004

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued):

<u>Fixed Assets</u> - The accounting and reporting treatment applied to the fixed assets associated with a fund are determined by its measurement focus. All proprietary funds are accounted for on a cost of services or "capital maintenance" measurement focus. This means that all assets and all liabilities (whether current or non-current) associated with their activity, are included on their balance sheets. Their reported fund equity (net total assets) is segregated into contributed capital and retained earnings components. Proprietary fund type operating statements present increases (revenues) and decreases (expenses) in net total assets.

All fixed assets are valued at historical cost or estimated historical cost, if actual historical cost is not available. Donated fixed assets are valued at their estimated fair value on the date donated.

Depreciation of all exhaustible fixed assets used by proprietary funds is charged as an expense against their operations, and the accumulated depreciation is reported on the balance sheets. Depreciation has been provided, using the straight-line method over the estimated useful lives, as follows:

Buildings	30-40 years
Improvements	20-30 years
Reservoirs and Tanks	50 years
Mains	40 years
Wells	30 years
Equipment	5-20 years

Basis of Accounting - Basis of accounting refers to when revenues and expenses are recognized in the accounts and reported in the financial statements. Basis of accounting relates to the timing of the measurements made, regardless of what measurement focus may be applied.

All proprietary funds are accounted for using the accrual basis of accounting. Revenues are recognized when they are earned, and expenses are recognized when they are incurred. Unbilled water and sewer fund utility service receivables are recorded at year-end. All proprietary funds, such as the District, have the option of consistently following or not following pronouncements issued by the Financial Accounting Standards Board (FASB) subsequent to November 30, 1989. The District has elected not to follow FASB standards issued after that date, unless such standards are specifically adopted by GASB.

<u>Investments</u> - Investments are accounted for under GASB 31, which requires that investments be reported at fair market value, except for certain investments, which include certificates of deposit, money market investments, and U.S. Treasury and agency obligations with an initial maturity of one year or less, which are reported at amortized cost.

<u>Inventory</u> - Inventory is valued at the lower of cost (first-in, first-out) or market. Inventory consists of expendable supplies held for consumption.

NOTES TO FINANCIAL STATEMENTS (Continued)

June 30, 2005 and 2004

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued):

Accumulated Vacation and Sick Leave - Accumulated vacation and sick leave is accrued when incurred to recognize the employees' rights to receive compensation for future absences. This amount is computed using current employee accumulated vacation hours and one-half accumulated sick leave hours at current pay rates.

<u>Comparative Data</u> - Comparative total data for the prior year have been present in the accompanying financial statements in order to provide an understanding of changes in the District's financial position and operations.

<u>Interfund Transactions</u> - The District's interfund transactions during the year relate directly to services rendered or facilities provided. These are recorded as an expense in the receiving fund with a corresponding liability for the amount due to the disbursing fund.

<u>Use of Estimates</u> - The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect certain reported amounts and disclosures. Accordingly, actual results could differ from those estimates.

3. CASH AND INVESTMENTS:

As a public agency, the District's investment practices are prescribed by various provisions of the California Government Code and the Act, as well as by administrative policies. The District's statement of investment policy is approved by the Board and describes the investment authority, practices and limitations. The basic investment policy objectives, in order of importance, are safety of principal, liquidity and return on investment.

Restricted Cash and Investments – The District holds cash and investments to provide for specific activities in accordance with special regulations, bond covenants or trust arrangements. The accounts are classified as "restricted." Most restricted accounts have minimum cash and investment balance requirements and all are nondiscretionary in terms of the use of assets. Among other things, the restricted accounts provide for reserves for principal and interest on outstanding debt; payments for construction of capital assets; and refunding of customer deposits.

<u>Deposits</u> - The District's demand and time deposits are fully insured or collateralized by pooled securities held by the District's agent in the District's name. State law requires public agency deposits, including time deposits, in excess of insured levels to be collateralized by the depository institutions with pooled government securities having market values of at least 100 percent of the deposits. To ensure compliance with the 110 percent requirement, the collateral must e marked to market at least monthly by the bank.

<u>Investments</u> - The District is permitted by State law and Board policy to invest in a variety of instruments including U.S. Treasury, federal agencies, and other securities (including negotiable certificates of deposit, bankers' acceptances and prime commercial paper.) All instruments are subject to various limitations and restrictions. In the case of money market instruments issued by private entities, risk is controlled by strict eligibility requirements and duration limitations.

NOTES TO FINANCIAL STATEMENTS (Continued)

June 30, 2005 and 2004

3. CASH AND INVESTMENTS (Continued):

<u>Investments (Continued)</u> - The District's asset backed securities are secured by triple A rated securities, primarily mortgages from FHLB, FNMA, and other federal agencies. At June 30, 2005, all investments, except deposits in the State Treasury Local Agency Investment Fund (LAIF), consist of investments that are insured or registered, or for which the securities are held, in the District's name. It is the District's intent to hold investments until maturity, unless earlier liquidation would result in an investment gain.

<u>Investment in State Investment Fund (LAIF)</u> - The LAIF, created by California statute, is a part of a pooled money investment account. The LAIF has oversight by the Local Investment Advisory Board, which consists of five members designated by statute. The Chairman is the State Treasurer, or his designated representative. The District's fair value of its position in the pool is the same as the value of the pool shares.

Cash on deposit as of June 30, 2005 and 2004 was reconciled to the balances reflected on the books.

These funds were on deposit in the following depositories:

	Fair Value			Cost Basis		Cost Basis Fair V		Fair Value

6. EMPLOYEE BENEFITS:

Employees Retirement Plan (Defined Benefit Pension Plan)

Plan Description - The San Lorenzo Valley Water District's defined benefit pension plan provides retirement and disability benefits, annual cost-of-living adjustments, and death benefits to plan members and beneficiaries. The San Lorenzo Valley Water District's defined benefit pension plan is part of the Public Agency portion of the California Public Employees Retirement System (CalPERS), and agent multiple-employer plan administered by CalPERS, which acts as a common investment and administrative agent for participating public employers within the State of California. A menu of benefit provisions as well as other requirements are established by State statutes within the Public Employees' Retirement Law. The San Lorenzo Valley Water District selects optional benefit provisions from the benefit menu by contract with CalPERS and adopts those benefits through local ordinance. CalPERS issues a separate comprehensive annual report. Copies of the CalPERS' annual financial report may be obtained from the CalPERS Executive Office - 400 P Street - Sacramento, CA 95814.

Funding Policy - Active plan members in the San Lorenzo Valley Water District defined pension plan are required to contribute 3.5% of their annual covered salary. The San Lorenzo Valley Water District is required to contribute the actuarially determined remaining amounts necessary to fund the benefits for its members. The actuarial methods and assumptions used are those adopted by the CalPERS Board of Administration. The required employer contribution rate for fiscal 2004/2005 was 0.00%. The contribution requirements of the plan members are established by State statute and the employer contribution rate is established and may be amended by CalPERS.

June 30, 2005 and 2004

6. EMPLOYEE BENEFITS (Continued):

Employees Retirement Plan (Defined Benefit Pension Plan) (Continued)

Annual Pension Cost - For fiscal year 2004/2005, the San Lorenzo Valley Water District defined benefit pension plan's annual pension cost was \$0.00 and the San Lorenzo Valley Water District actually contributed \$0.00. The required contribution for fiscal year 2004/2005 was determined as part of the June 30, 2001 actuarial valuation using the entry age normal actuarial cost method with the contributions determined as a percent of pay. The actuarial assumptions included (a) 8.25% investment rate of return (net of administrative expenses); (b) projected salary increases that vary by duration of service ranging from 3.75% to 14.20%, and (c) 3.75% cost-of-living adjustment. Both (a) and (b) included an inflation component of 3.5%. The actuarial value of San Lorenzo Valley Water District's defined benefit pension plan's assets was determined using a technique that smoothes the effect of short-term volatility in the market value of investments over a two to five year period depending on the size of investment gains and/or losses. San Lorenzo Valley Water District's defined benefit pension plan's unfunded actuarial accrued liability (or excess assets) is being amortized as a level percentage of projected payroll on a closed basis. The remaining amortization period at June 30, 1998 was 2 years.

Three-Year Trend Information for San Lorenzo Valley Water District's Defined Benefit Pension Plan:

— Fiscal	Annual	Percentage	Net
Year	Pension	of APC	Pension
Ending	Cost (APC)	Contributed	<u>Obligation</u>
6/30/97	-0-	100%	N/A
6/30/98	-0-	100%	N/A
6/30/99	-0-	100%	N/A

Required Supplementary Information Funded Status of Plan:

The table below displays a short history of the Entry Age Normal Accrued Liability, the Actuarial Value of Assets, the Unfunded Liability of (Excess Assets), Funded Status (i.e., the ratio of the Actuarial Value of Assets to Entry Age Normal Accrued Liability), the estimated annual covered payroll and the Unfunded Actuarial Accrued Liability (UAAL) as a percentage of that covered payroll. For those plans include 1st or 2nd level 1959 Survivor Benefit, the liabilities and assets below include the assets and liabilities for current beneficiaries of your 1959 Survivors Benefit program. For all other plans, the assets and liabilities below are without regard to the 1959 Survivor Benefit programs.

NOTES TO FINANCIAL STATEMENTS (Continued)

June 30, 2005 and 2004

7. INTERFUND RECEIVABLES AND PAYABLES:

At June 30, 2005 the Sewer Fund was indebted to the Water Fund in the amount of \$188,169.

At June 30, 2004 the Sewer Fund was indebted to the Water Fund in the amount of \$37,831.

8. CUSTOMER DEPOSITS:

In March, 1980, the District implemented a new policy with respect to customer deposits. As of July 1, 1980, all deposits are to be held until the account is closed out. Additionally, all accounts bear interest at the annual rate of 5.5%, up to the date of close out. The deposits plus interest earned are credited against final billings, and any credit balance refunded. The deposit monies are invested, and the total of invested deposits and accrued interest earned is shown in the restricted cash section of the financial statements. Pursuant to District Ordinance No. 88, adopted April 7, 1994, each applicant for water service is required to furnish a refundable account deposit of \$75. After one (1) year in continuous service in good standing with the District, upon request of the customer, the District will return an account deposit.

9. CONNECTION DEPOSITS:

District Ordinance No. 48, adopted December 5, 1983, provides for the handling of water service connection charge deposits. Upon proper documentation, such deposits can be refunded if water meters are not set. The deposits are accounted for separately to fulfill this obligation.

10. RETAINED EARNINGS - DESIGNATED:

An analysis of designated retained earnings at June 30 consists of the following:

	2004	<u>Additions</u>	<u>2005</u>
Designated for:			
Emergency Reserve	\$ 733,898		\$ 880,000
Vacation and Sick Leave	125,000		270,000
Capital Project Reserve	2,100,000		815,200
Equipment Replacement Reserve	90,000		135,000
Wastewater Reserve	850,000		0
Vehicle Reserve	100,000		0
Capital Improvement Project	1,000,000		2,500,000
Total	\$4,998,898		<u>\$4,600,200</u>

NOTES TO FINANCIAL STATEMENTS (Continued)

June 30, 2005 and 2004

11. RISK MANAGEMENT:

The District is exposed to various risks of loss related to limited torts; theft of, damage to and destruction of assets; errors and omissions and natural disasters for which the District carries commercial insurance. There have been no significant reductions in coverage from the prior year and settlements have not exceeded coverage in the past three years.

General Liability, Automotive Liability, Property Damage, and Errors and Omissions:

The San Lorenzo Valley Water District participates in a joint powers authority, the Special District Risk Management Authority (the Authority). The Authority was formed to provide member districts with general liability, automotive liability and property damage, and errors and omissions risk financing coverage.

The San Lorenzo Valley Water District participates in the liability and property program. The District has an auto and general liability self-insured retention level of \$1,500 and a \$2,000 property program deductible. A self-retention is similar to a deductible.

The Authority is governed by a board which controls the operations of the Authority independent of any influence by the San Lorenzo Valley Water District. The Authority is independently accountable for its fiscal matters. The insurance group maintains its own accounting records. The relationship between the District and the Authority is such that the Authority is not a component unit of the San Lorenzo Valley Water District for financial reporting purposes.

Workers Compensation: Statutory - through State Compensation Insurance Fund.

12. WATERMAN GAP TRANSACTION:

On September 21, 2000, the Board of Directors of the San Lorenzo Valley Water District unanimously approved District Ordinance 98 (00-01) which authorized the sale of approximately 1,340 acres of unimproved forestland generally know as Waterman Gap (Santa Cruz County Assessor's Parcel Nos. 87-0311-03, 04, 05, 06, 87-041-01 and 88-091-18) to Sempervirens Fund, Inc., a non-profit organization for the sum of ten million nine hundred thousand dollars (\$10,900,000). Covenants to the real estate purchase contract assigned from Sempervirens Fund, Inc. to San Lorenzo Valley Water District the exclusive right to purchase two (2) additional real properties APN 79-011-02 and -22 (generally known as Cook and Hulse properties). On October 30, 2000, the San Lorenzo Valley Water District purchased APN 79-011-02, a parcel of approximately 40 acres from Cook, for the sum of ninety five thousand dollars (\$95,000) and APN 79-011-22 a parcel of approximately 100 acres from Hulse, for a sum of four hundred fifty thousand dollars (\$450,000).

NOTES TO FINANCIAL STATEMENTS (Continued)

June 30, 2005 and 2004

WATERMAN GAP TRANSACTION (Conti	nued):
---	--------

The transaction was completed on October 18, 2000. As part of the transaction the District seller financed \$9,700,000 of the transaction. The terms of the promissory noted are as follows:

Note Receivable – Sempervirens Fund, Inc. of \$9,700,000, secured by a first deed of trust, due in annual installments of \$970,000 plus interest at the rate of 8.0 percent per annum.

Balance as of June 30:

\$\frac{2005}{2004}\$

13. NET ASSETS:

Net assets comprise the various net earnings from operating and non-operating revenues, expenses and contributions of capital. Net assets are classified in the following three components: invested in capital assets, net of related debt; restricted for capital activity and debt service; and unrestricted net assets. Invested in capital assets, net of related debt, consists of all capital assets, net of accumulated depreciation and reduced by outstanding debt that is attributable to the acquisition, construction and improvement of those assets; debt related to unspent proceeds or other restricted cash and investments is excluded from the determination. Restricted for capital activity and debt service consists of net assets for which constraints are placed thereon by external parties, such as lenders, grantors, contributors, laws, regulations and enabling legislation, including self-imposed legal mandates. Unrestricted consists of all other net assets not included in the above categories.

14. PURCHASE OF PROPERTY:

On August 13, 2004, the District completed the purchase of APNs 81-204-04 and 06, generally located at 12804 Highway 9, Boulder Creek, CA. The purchase price for said property was \$722,000. This property, commonly known as the "Prosser Property" contains approximately 28,800 square feet and is improved with two (2) wood frame single story office/storage buildings. One building is approximately 1,900 square feet and the other building is approximately 1,500 square feet.

The District purchased the property for the expressed purpose of relocating a portion or all of the District's existing administration and/or operations facilities. Estimated date for relocation has not yet been established.
